INTERNATIONAL SYMPOSIUM ON THE TAXONOMY
OF THE ACTINOMYCETALES

in connection with

Meetings of the International Subcommittee on the
Taxonomy of Actinomycetes,
Meetings of the International Subgroups,
Meetings of cooperators of ISP.

Jena, September 17-21, 1968

Deutsche Akademie der Wissenschaften zu Berlin
Institut für Mikrobiologie und experimentelle
Therapie, Jena. Director: Prof. Dr. H. Knöll

Actinomycetes are getting more and more practical and scientific importance. The demand for ensured and workable taxonomic evidences is still increasing. Thus, at the International Microbiological Congress in Moscow 1966, a meeting of specialists was thought helpful, in order to learn new facts, to estimate the present taxonomic position, and to elaborate common outlines for the future.

Sections of the Symposium:

1. Taxonomy of the various taxa of Actinomycetales.
2. Interrelationships among Actinomycetales taxa and between them and taxa of Eubacteriales.
3. Special and new methods used in taxonomic work.
4. General principles and methods of microbial taxonomy.

One day is provided for an excursion to Erfurt (Gothic cathedrals) and Weimar (home of Schiller and Goethe).

Scientists from 17 countries have already signified their intention to attend the symposium.

Correspondence concerning the symposium should be addressed to:
