Redefining *Paracoccus denitrificans* and *Paracoccus pantotrophus* and the case for a reassessment of the strains held by international culture collections

Donovan P. Kelly, Jean P. Euzéby, Celia F. Goodhew and Ann P. Wood

International Journal of Systematic and Evolutionary Microbiology (2006), **56**, part 10, 2495–2500

On p. 2496, the paragraph labelled ‘3’ should read:

‘3. The entry for *P. pantotrophus* should be amended [not ‘expanded’] to include DSM 65 and LMG 4218 as valid examples of this species [not ‘the type strain’] and the accession number for the 16S rRNA gene sequence of the type strain (ATCC 35512^T) needs to be cited (Y16933).’
